

Design Document for the titanium block

1.1 Brief description

The Titanium block is a forge mod for minecraft that adds a new block simply known as “Titanium”. Titanium is a new type of ore that can be found in mines and caves. The ore sits in between iron and diamond in terms of rarity, durability and damage. When mined, titanium drops four titanium ore. The ore can then be turned into titanium ingots using an oven, the titanium ingots can then be used to craft various items.
